- Security Metrics

Arctec Group's pragmatic, hands-on training for building security into your SOA & Web Services systems

Date: Sept. 21, 2006

Location: Bloomington, MN

Price: \$400

Registration Information: info@arctecgroup.net

We explore the fundamental building blocks and security elements in SOA and Web Services systems: services, XML documents, service registries, and enterprise service bus with a focused case study examining where SOA and Web Services present new security risks, what standards are available to deal with the risks, how to implement the standards, and where standards do not help and custom code and configuration must be used.

At the end of the day, students should understand the key security threats in SOA and Web Services, and how to leverage standards and security protocols to proactively build security into their SOA and Web Services system.

Instructor

Gunnar Peterson is a Managing Principal at Arctec Group. He is focused on distributed systems security for large mission critical financial, financial exchanges, healthcare, manufacturer, and insurance systems, as well as emerging start ups Mr. Peterson is an internationally recognized software security expert, frequently published, an Associate Editor for IEEE Security & Privacy Journal on Building Security In, an Associate Editor for Information Security Bulletin, a contributor to the SEI and DHS Build Security In portal on software security, and an in-demand speaker at security conferences.
